CLASP -comprehensive , lightweight application security process (SecureSoftware. 2005)	Standard SDLC - (SecureSoftware. 2005)
Have security policy in place. Build security Team Security requirements, Roles and resource capabilities Detail misuse cases CLASP resources allocation	Requirements Gathering
Security risk assessment Security architecture design Identify attack surface Apply security principles to design Threat model Data Base security configuration	Designing
Start security awareness program Identify and test for vulnerability root causes	Test planning
Address security issues Perform security review Build operational security guide	Secure software coding
Identify and perform security tests Input validation testing CIA triad testing	Testing and results
Monitor security metrics Manage security issue disclosure	Release and continue maintenance
